

Privacy Policy for Offline Transcriber

Last updated: September 3, 2026

Offline Transcriber ("the App") is a desktop speech-to-text application designed to help users, including people who are deaf or hard of hearing, convert spoken audio into text.

We respect your privacy. Offline Transcriber is designed with a local-first approach: audio processing and transcription are performed on your device and are not uploaded to our servers.

1. Information We Process

Audio and microphone data

Offline Transcriber may access audio from your device's microphone when you choose to use live transcription.

The App processes this audio solely to provide speech-to-text functionality.

Audio recordings are processed locally on your device and are not uploaded to or transmitted to us.

Transcripts

The App generates text transcripts from audio processed on your device.

Your transcripts are stored locally on your device when you choose to save them. We do not receive, collect, or store your transcripts on our servers.

You are responsible for the transcripts you choose to save, export, or share.

Personal information

Offline Transcriber does not require you to provide your name, email address, phone number, address, or other personally identifying information to use its core offline transcription functionality.

We do not sell, rent, or otherwise monetize your personal information.

2. Internet and Network Access

The core transcription functionality of Offline Transcriber is designed to work without an internet connection.

The App does not send your microphone audio, recordings, or transcripts to a remote server for transcription.

If future versions of the App introduce online services or features that require transmitting personal information, this Privacy Policy will be updated before those features are introduced.

3. Speech Recognition and Machine Learning

Offline Transcriber may use locally installed speech-recognition or machine-learning models to convert audio into text.

These models operate on your device. Audio supplied to the models is processed locally and is not sent to a cloud-based transcription service by Offline Transcriber.

4. Files You Choose to Open or Import

If you choose to import an audio or video file into Offline Transcriber, the App may access that file solely to perform the requested transcription.

Imported files are processed locally on your device.

The App does not upload imported files to us.

5. Data Storage

Offline Transcriber may store application settings, imported files, recordings, and transcripts locally on your device depending on the features you use and the choices you make.

You can manage or delete locally stored files using the App or your operating system's file-management tools.

We do not have access to files or transcripts stored locally on your device.

6. Analytics and Tracking

Offline Transcriber does not use advertising trackers or sell user data.

7. Third-Party Services

The core transcription functionality does not require sending audio, recordings, or transcripts to third-party cloud transcription services.

The App may rely on operating-system services or libraries required for normal application functionality. Such components may process information according to their own privacy policies and Microsoft's applicable privacy practices.

If we introduce a third-party service that receives personal information, we will update this Privacy Policy to identify the service and explain what information is shared and why.

8. Data Security

Because your audio and transcripts are processed locally, they remain under your control on your device.

You are responsible for protecting access to your device, user account, files, and locally stored transcripts.

We recommend using appropriate device security measures such as a strong password or PIN, encryption, and operating-system security updates.

9. Children's Privacy

Offline Transcriber is intended for use by people of all ages, including children under the age of 13. Children under the age of 13 should use the App with the supervision and involvement of a parent, guardian, teacher, or other responsible adult.

Offline Transcriber does not knowingly collect, sell, or share children's personal information through its core transcription functionality. Audio and transcripts are processed locally on the user's device and are not uploaded to our servers.

Parents and guardians are responsible for supervising children's use of the App and for managing any audio files, recordings, transcripts, or other information stored locally on the device.

10. Your Privacy Rights

Because Offline Transcriber does not collect or maintain your audio recordings or transcripts on our servers, we generally do not possess those files and therefore cannot access, modify, export, or delete them for you.

You can manage locally stored application data and transcripts directly on your device.

11. Changes to This Privacy Policy

We may update this Privacy Policy when the App's functionality, data practices, or applicable legal requirements change.

The "Last updated" date at the top of this policy will be updated when changes are made.

If future versions of Offline Transcriber collect, transmit, or share additional personal information, this Privacy Policy will be updated to describe those practices.

12. Contact Us

If you have questions, concerns, or requests regarding this Privacy Policy or Offline Transcriber, please contact:
